

Immunizations for Adolescents (IMA)

HEDIS® Measurement Year 2024

Measure Description: The percentage of adolescents 13 years of age who had one dose of meningococcal vaccine, one tetanus, diphtheria toxoids and acellular pertussis (Tdap) vaccine, and have completed the human papillomavirus (HPV) vaccine series by their 13th birthday.

Eligible Population

Adolescents who turn 13 years of age during the measurement year.

Product Lines

Commercial, Medicaid

Data Collection Method

Administrative (claims), Supplemental data, Hybrid (medical record)

Note: The IMA measure is hybrid. Any care not received via claims during the measurement year will result in medical record requests during the HEDIS medical record review project.

Exclusions

Members are excluded from the measure if they meet the following criteria:

- Members who are in hospice.

Measure Compliance (numerator)

The measure calculates a rate for each vaccine and two combination rates.

Meningococcal – At least one meningococcal serogroups A, C, W, Y vaccine, with a date of service on or between the member's 11th and 13th birthdays.

Meningococcal recombinant (serogroup B) (MenB) vaccines do not count towards adherence.

Tetanus, diphtheria toxoids, and acellular pertussis (Tdap) – At least one tetanus, diphtheria toxoids and acellular pertussis Tdap vaccine, with a date of service on or between the member's 10th and 13th birthdays.

Human papillomavirus (HPV) – At least two HPV vaccines with different dates of service on or between the member's 9th and 13th birthdays.

There must be at least 146 days between the first and second dose of the HPV vaccine, or at least three HPV vaccines, with different dates of service on or between the member's 9th and 13th birthdays.

Combination 1 – Numerator compliant for both the meningococcal and Tdap vaccines.

Combination 2 – Numerator compliant for all three vaccines.
