

# Breast Cancer Screening (BCS-E)

HEDIS® Measurement Year 2024

Electronic Clinical Data Systems (ECDS) Measure

**Measure Description: The percentage of women 50-74 years of age who had a mammogram to screen for breast cancer between October 1 two years prior to the measurement year through December 31 of the measurement year.**

## Eligible Population

Members ages 50-74 years of age as of December 31 of the measurement year.

## Product Lines

Commercial, Medicaid, Medicare

## Data Collection Method

Administrative (claims) and Supplemental data

## Exclusions

Members are excluded from the measure if they meet the following criteria:

- Members who are in hospice.
- Members who are in palliative care.
- Bilateral mastectomy any time during the members history through December 31 of the measurement year.
- Members 66 years of age and older as of December 31 of the measurement year with frailty and advanced illness during the measurement year.

## Measure Compliance (numerator)

One or more mammograms any time on or between October 1 two year prior to the measurement year and December 31 of the measurement year.

*The BCS measure evaluates primary screening. Biopsies, breast ultrasounds or MRIs do not count towards compliance because they are not appropriate primary screening methods for breast cancer. Several methods of mammograms (screening, diagnostic, film, digital, or digital breast tomosynthesis) qualify for numerator compliance.*

## Numerator Codes

The complete NCQA approved code set list can be referenced in the coding guide at <https://healthplan.org/providers/patient-care-programs/quality-measures>.
