

Advanced Care Planning (ACP)

HEDIS® Measurement Year 2022 Measures

Measure Description: Assesses the percentage of adults 66–80 years of age with advanced illness, an indication of frailty or who are receiving palliative care, and all adults 81 years of age and older, who had advance care planning during the measurement year.

Eligible Population

- Medicare members 66 years and older as of December 31 of the measurement year.
- Members who are in hospice are excluded from the eligible population.

Advanced Care Planning

A discussion or documentation about preferences for resuscitation, life-sustaining treatment, and end of life care during the measurement year. Documentation of discussion, a notation of a previously executed care plan, or the presence of a care plan in the medical record count towards compliance.

Strategies for Improvement

- Discuss the importance of having a living will, legal or surrogate decision maker.
- Discuss directives about treatment preferences with your patients.
- Offer instructions regarding initiating, continuing, withholding, or withdrawing specific life-sustaining treatment.
- Document initiated advance care discussions even when declined by the patient.

Numerator Codes

The complete NCQA approved code set list can be referenced in the coding guide at <https://www.healthplan.org/providers/patient-care-programs/quality-measures>.

For questions, please contact your practice management consultant. To identify your practice management consultant please refer to
