

Developmental Screening in the First Three Years of Life (DEV)

HEDIS® Measurement Year 2022 Measures

Measure Description: For members 1-3 years of age, percentage of children screened for risk of developmental, behavioral, and social delays using a standardized screening tool in 12 months preceding or on their first, second or third birthday.

Eligible Population

Members between the ages of 1-3 in the measurement year. There are 3 age stratifications reported:

- Children who turned 1 during the measurement year
- Children who turned 2 during the measurement year
- Children who turned 3 during the measurement year.

Clinical Recommendations

The American Academy of Pediatrics (AAP) recommends all children be screened for developmental delays and disabilities during regular well-child visits at 9 months, 18 months, 24 months and 30 months.

Strategies for Increasing Developmental Screening, Understanding and Utilization

- Educate parents to monitor for developmental milestones such as: taking a first step, smiling for the first time, waving “bye,” crawling, walking, etc.
- Educate on risk factors for developmental delays that include:
 - Preterm birth
 - Low birth weight
 - Lead exposure
 - Long lasting health problems or conditions
- Educate staff to schedule visits within guideline time frames.

- Advise parents that developmental screening tools will not provide a diagnosis but can assist in determining if a child is developing according to standard developmental milestones.
- Establish a “screening champion” in your office. This is anyone in your practice you designate to advocate for developmental screening with parents and caregivers of young children.
- Offer different options for parents and caregivers to complete valid questionnaires prior to scheduled well-child checks.
- Provide space in the reception area 15 minutes prior to scheduled appointments so the ASQ-3 can be completed in a quiet corner.
- Be sure a nurse or other healthcare provider is available to assist with answering any questions.
- Mail the questionnaire to the parents or caregivers prior to the visit or make available online so it can be completed prior to the visit
